

The Seat of the Soul Institute

Source: Google Analytics 4 (property 296097870) · trailing 12 months: Jun 25, 2025 – Jun 24, 2026 · Prepared by 22D Marketing.

The site is **attracting more people than ever** — sessions are up **55% year over year** — but it is **holding far fewer of them**. Engagement has fallen from 52% to **32%**, bounce has climbed to **68%**, and average time on site has nearly halved (219s → 122s). The data points to one conclusion: the platform can no longer keep up with the audience the brand is earning.

How the current site is costing you

- ↓ **Engagement collapsed while traffic grew.** Sessions rose **+55%** YoY, yet engaged sessions actually **fell** (38,623 → 36,613). More visitors, fewer staying.
- ↓ Your **best-quality channel — organic search** (56% engagement) — is only **23%** of traffic, capped by the site's SEO gaps.
- ↓ Your largest audience is mobile — **56%** of sessions — and that's exactly where the site is slowest (**18.5s** to show the main content) and the menu is hidden.
- ↓ AI search is essentially zero: **9** sessions from AI assistants in a year — the fastest-growing way people discover brands, and the site isn't built to be cited.
- ↓ The **home page** is the #1 entry point (**47,975** sessions, 41% of all) and **~70% bounce** — the single highest-leverage page, and the weakest.
- ↓ Only **2.8%** of sessions complete a key action — the structure isn't guiding visitors toward what matters.

WHERE VISITS COME FROM — LAST 12 MONTHS, BY SESSIONS

High-quality, high-intent traffic (organic search, 56% engagement) is the smallest of the big three; low-engagement social (12%) is nearly as large. **Fixing SEO / AEO / GEO grows the audience that actually engages.**

What migrating to the new site gains you

Each gain maps to a real number from the audience you already have.

ENGAGEMENT IS FALLING — THE REDESIGN TARGETS THIS DIRECTLY

YOUR AUDIENCE IS MOSTLY MOBILE — EXACTLY WHERE THE SLOW SITE HURTS

What we propose to improve

- ✓ **A fast site for the mobile majority.** Rebuild targets LCP **<2.5s** (from 18.5s) and <3MB pages — serving the **56%** of visits on phones first.
- ✓ **A home that holds visitors.** The redesign rebuilds the exact page **47,975** people land on first — clearer message, guided flow — to cut the 70% bounce.
- ✓ **Grow your best channel.** Built-in SEO fixes target organic search — your highest-engaging traffic (56%) — to lift it past today's 23% share.
- ✓ **Open the AI-search channel.** FAQ schema + entity data for Gary Zukav make the site citable by ChatGPT, Perplexity & Google AI — a channel sending just **9** sessions today.
- ✓ **Guide visitors to act.** Clear, single CTAs per section target the **2.8%** key-action rate — turning attention into enrollments, sign-ups, and donations.
- ✓ **A secure, low-maintenance platform.** Webflow removes the plugin attack surface (the current site already shows an unauthorized injection) and the hosting / backup burden.

The one-line case: the brand is earning more traffic than ever, but a slow, hard-to-read, search-invisible platform is letting it slip away — most of it on mobile, most of it on the home page. The new site is engineered to keep the audience you already have, and to be found by the audience you're missing.
