

A plugin ecosystem behind on updates and licenses

WordPress admin review of seatofthesoul.com · June 2026, with the live browser console checked. Scope: installed plugins — the most common attack vector for WordPress sites. Prepared by 22D Marketing.

37

Plugins with pending updates
a significant maintenance backlog

7

Premium add-ons with
expired / missing licenses
no security updates received

5

Elementor extensions with
compatibility warnings
unverified against the latest
release

1

Broken plugin dependency
a non-functional plugin

Plugins are the **number-one attack vector** for WordPress. This installation shows a significant backlog: **37 plugins** with pending updates, several premium add-ons with expired or missing licenses, Elementor compatibility warnings, and a broken dependency. Each outdated or unlicensed plugin expands the site's attack surface.

Outdated plugins turn known vulnerabilities into public exploits — **Remote Code Execution, Cross-Site Scripting (XSS), SQL Injection, privilege escalation** and **authentication bypass** — plus compatibility failures and site instability after updates.

Critical issues found

Formidable Forms — 7 premium add-ons unlicensed.

Pro **expired**; Abandonment, Datepicker, Digital Signatures, PDFs, Stripe and Zapier **missing**. No security updates, bug fixes or support.

Elementor compatibility warnings. 5 extensions unverified against the latest Elementor — Elementor Pro, JetElements, Timeline Widget, Ultimate Addons Lite, Columns Reordering. Updating Elementor risks broken layouts.

Broken dependency. The **WooCommerce Authorize.Net Gateway** cannot activate (required plugins missing/inactive) — the payment gateway is currently non-functional.

A Gravity Forms add-on throws a live JS error. The StartEnd Subscription add-on runs before Gravity Forms loads, throwing an uncaught **gform is not defined** error on the home page (in any browser console). Its add-ons are also behind current releases; the deprecated jQuery Migrate shim is still loaded too.

Code & SEO plugins outdated. **WPCode Lite** (runs custom PHP snippets — security-sensitive), **Yoast SEO** and **Google Site Kit** all have updates pending.

A long tail of pending updates. Contact Form 7, Advanced Custom Fields, Redirection, JetEngine, Paid Memberships Pro, Fluent Forms and more — maintenance has not been performed regularly.

Overall plugin-maintenance risk: moderate to high. On Webflow there are no plugins to patch, no premium licenses to renew, and no third-party plugin attack surface to maintain — the entire category of risk above disappears.
